How to Use This Table

The figures under the months in the table on the left refer to one of the seven small tables as numbered from 1 to 7. The figures under "years" are the years in the twentieth century, each line of the table answering for 3 to 4 different years.

EXAMPLES—For Jan., 1901, use No. 6; for Feb., 1901, No. 3; for Aug., 1903, No. 2; for July, 1946, No. 7.

6

S.	M.	T.	W.	T.	F.	S.
						1
7	8	9	10	11	12	13
14	15	16	17	18	19	20
21	22	23	24	25	26	27
28	29	30	31			

A note matures Oct. 3, 1902, is it Sunday? SOLUTION—Under Oct., in line with 1902, the figure "5" is found. Referring to Calendar Table No. 5, the Sundays are 5, 12, 19, 26, so Oct. 3, 1902, is not Sunday, but Friday. The figure "5" in this example also means that the first Sunday in Oct., 1902, is the 5th day of that month; so, likewise, do the figures under months mean the day of the month on which the first Sunday of that month occurs, and by adding 7 consecutively, the Sundays are discovered without reference to the small tables.

NOTE—To use this table for the 19th century, add 96 to the year wanted and take the line on which the SUM is found. If the year 1812 is wanted, 1812 + 96 = 1908, the line that answers for the year 1812. (Exception: 1900 is found in line of 1906, and for 1801, 2, 3 and 4 add 124.)

Fisher's
20th Century Interest Tables.

All kinds of Interest and Discount:

Simple Interest at 4, 5, 6, 7, 8, 9, 10%, in the basis of 360 days to the year,—one dollar to one million dollars—one day to 7 years; and,

With table of Equivalent Rates making these available for the same Principals and Time at ¼, ½, ¾, 1, 1¼, 1½, 1¾, 2, 2¼, 2½, 2¾, 3, 3½, 4½, 5½, 6½, 7½, 11, 12, 15%, etc.

Accurate Interest, at any rate, any principal, any time, on basis of 365 days to the year, by use of a table that changes Simple interest into Accurate interest instantly.

Compound Interest at 2, 2½, 3, 3½, 4, 4½, 5, 6, 7, 8, 9, 10% until the interest equals the principal.

Added Interest or "Genuine Bank Discount," at 4, 5, 6, 7, 8, 9, 10% for 30, 60, 90, 120 Days,—one dollar to one million dollars.

Interest on Daily Balances at 1½, 2, 2½%, on basis of 365 days to the year.

Savings Bank Interest at 3% and 4% on basis of both 360 and 365 days to the year.

COMMERCIAL, FRACTIONAL, CUMULATIVE AND PARTIAL PAYMENT DISCOUNT TABLES.

INVESTMENT AND INCOME, CALENDAR, TIME, MATURITY AND DUE-DATE TABLES.

TABLE OF EQUIVALENT RATES.

1/8 % = 1/40 of 5%	2 1/2 % = 1/2 of 5%
1/4 % = 1/20 of 5%	2 3/4 % = 1/4 of 11%
1/2 % = 1/10 of 5%	3 % = 1/2 of 6%
3/4 % = 1/8 of 6%	3 1/2 % = 1/2 of 7%
1 % = 1/4 of 4%	4 1/2 % = 1/2 of 9%
1 % = 1/10 of 10%	5 1/2 % = 5% + 1/10 of itself.
1 1/4 % = 1/4 of 5%	6 1/2 % = 6% + 1/12 of itself.
1 1/2 % = 1/4 of 6%	7 1/2 % = 5% + 1/2 of itself.
1 3/4 % = 1/4 of 7%	11 % = 10% + 1/10 of itself.
2 % = 1/2 of 4%	12 % = 2 × 6%
2 1/4 % = 1/4 of 9%	15 % = 3 × 5% &c, &c.

The application of Equivalent Rates is easily understood.

EXAMPLE:—$900 for 60 days @ 4½%. See 60 day table, 9%, page 45;—the interest on $900 is $13.50; and one-half of this is $6.75, the interest on $900, 60 days @ 4½%.

The same result is also obtained by taking one-half of the principal; for, $450 @ 9%, is the same as $900 @ 4½%.

The Use of the Simple Interest Tables.

The Simple Interest Tables are computed on the basis of 30 days to the month, 360 days to the year, at 4% to 10%.

The Full Page Tables provide for all ordinary periods of time; day by day to 30 days, and month by month to one year: and, by uniting the results from not more than two of these tables, the interest for *any time* within one year is at once obtained.

NOTE—A section of the 60 days table is inserted on this page, and the illustrations are based on it.

The "Dollar Column" is a column of Principals, and it is inserted three times on each page to save tracing along the entire length of the lines. These columns contain the ordinary principals; dollar by dollar to $25, and 25 by 25 to $1,000: and, by uniting not more than two of these, *any* principal up to $1,000, as well as hundreds of others, is readily reached.

EXAMPLES.—For $998, use **975** and **23**, uniting the interest mentally, 13.00+.31=$13.31.

Any Principal up to one million dollars is provided for by the mental shifting of the decimal point.

EXAMPLES.—The interest on $175 is $2.33; and, by adding a cipher to 175, and shifting the decimal point, in the interest column, one place to the right, the interest on $1.750 is $23.33; and, shifting in both columns to the left, the interest on $17.50 is .23; and, $1.75 is .02.

In like manner there is interest,
At **6** for $6, $60; 60c. 6c; at **11** for $11. $110; $1.10, 11c.
At **12** for $12, $120; $1.20, 12c; at **350** for $350, $3,500; $35, $3.50, 35c.
At **700** for $700, $7,000, $70,000, $700,000; $70, $7, 70c. 7c.

Interest on large principals is quickly found; as,
For $8,519, use 8,500 at **850** and **19**=113.33+.25=$113.58.
For $704,893, use the following plan, setting down results and adding,

At **700** find for $700.000—		$9,333.33
At **400** find for	4,000—	53 33
875 and **18** make	893—	11 91 (11.67+.24)
The interest on $704,893 is		$9,398.57

Disregard all Cents of a Principal below fifty cents; but, if 50c. or more, increase the principal one dollar.

EXAMPLE.—The interest on $24.67 and $25 00 is practically the same.

The ordinary rates 4% to 10%, are in each table, and the table of Equivalent Rates, on page 2, gives all other rates that may be needed.

The Small Tables, pages 38, 39, etc., cover all days not given in full-page tables, up to the usual Bank limit of 124 days, and from one year to seven years. The interest on any principal up to one million dollars may be found in these little tables, by shifting the decimal point.

EXAMPLE.—For $7,450., take interest on 7,000, 400, and 50, and add together.

Commercial Discount Tables. The table on page 81 gives the discount on any amount at 4 to 10%; and, by using the tables on pages 82 and 83 and Equivalent Rates table on page 2 in connection with it, a wide range of rates is covered.

The Other Tables have full explanations in connection with them.

10—OCT.—22
11—NOV.—23
12—DEC.—24

The table gives the days, from any day in any month, to the *same* day in another month.

The time from Jan. 1 to May 1 is 120 days; and, likewise, the time from *any* day in January to the *same* day in May is 120 days. The time from Feb. 5 to May 5 is 89 days; from Oct. 3 to Jan. 3 is 92 days; from Nov. 17 to June 17 is 212 days.

ILLUSTRATIONS.—Required the *time* from Feb. 3 to Nov. 9, in the same year. By the table, from Feb. 3 to Nov. 3 = 273 days, plus the difference between the 3d and 9th; or, 273 + 6 = 279 days, the time.

Required the *date*, 93 days from Feb 3. "From Feb. to —" the nearest figures to 93 are 89, or 4 short of the 93 days, making May 3 plus 4, or May 7, the date.

1 Day.

EXPLANATION—Interest calculated on the basis of 360 days to the year is termed Simple Interest.

Interest calculated on the basis of 365 days to the year is termed Accurate Interest.

This table converts, or changes, Simple Interest into Accurate Interest instantly.

EXAMPLE—The Simple Interest on $6,000, at 8% for 63 days, is $84.00. In the above table, opposite 84 is $82.85, the Accurate Interest on $6,000 at 8% for 63 days.

To convert CENTS by this table: Mentally move the decimal point two places to the left.

EXAMPLE—Convert $229.84 Simple Interest into Accurate Interest:

225. = 221.92
4. = 3.95
.84 = .83

$229.84 = $226.70 Accurate Interest.

These Tables give the Compound Interest on ONE DOLLAR, for any number of years until the Interest equals the Principal.

THE USE OF COMPOUND INTEREST TABLES.

The compound interest, given in the tables, is on ONE dollar, and is always cents, mills, etc.; so, the principal must be multiplied by it and the product pointed off as in any multiplication involving decimals.

In ordinary cases the use of the first four decimals will suffice, but for approximately exact results, use all seven of the decimals.

EXAMPLES.—$450 at 3 %, 16 years=450×.6047=$272.12, the compound interest; then, $450+$272.12=$722.12, the amount, at compound interest.

Find amount, $450 at 5 %, 4 years 19 days. Solution: 450×.2155—$96.98; then, $450+$96.98=$546.98; then, by simple interest table, $546.98 at 5 %, 19 days=$1.45; and, $546.98+$1.45=$548.43. Ans.

Rates, 4 per cent to 10 per cent, for any amount. For fractional rates use Fractional Discount Table in connection with this.

$	4 %	5 %	$	6 %	7 %	8 %	$	9 %	10 %

COMMERCIAL DISCOUNT TABLES WHERE PARTIAL PAYMENTS ARE MADE.

These Tables will be found to be convenient in commercial transactions, when discounts are allowed, but the whole bill can not be paid.

EXAMPLE.—A jobber buys $20,000.00 worth of goods at 3 % off for cash in ten days. He remits $10,000.00 on these terms, and is entitled to $10,309.27 credit on the account.

And 10-5-5-2½ % off	51.476	47.517	43.557	39.597	31.678	23.758

EXPLANATION.—Call the rate at the top and then at the side, thus: "5 % and 2½ % off" = 92.625 % net; 30 and 10 % off = 63 % net; 20 and 10 and 5 % off = 68.4 % net. $400 at 20-10-5 % off = $400 × 68.4 % = $273.60, the net proceeds.

EXAMPLE.—A manufacturer buys 10 pulleys @ $25, list; discount 70-10-5 % off.

SOLUTION: $25 × 10 = $250, the list price of 10 pulleys.
70-10-5 % off = 25.65 %, net.
$250 × 25.65 % = $64.13, the net cost of 10 pulleys.

NOTE.—To obtain the Equivalent of the Cumulative Discounts, subtract the Discount Remainder, as given in the Table, from 100 %; thus, the Equivalent of 20-10-5 % = 100 % -- 68.4 % = 31.6 %.

The Table gives the Interest for ONE DAY, on the Basis of 365 Days to the Year.

ILLUSTRATIONS—(1) The footing of the monthly interest slip is $96,000; and, at 2 per cent, the interest is $5.26.
(2) The footing is $960,000; and, at 2 per cent, the interest is $52.60.
(3) The footing is $700,000; and, at 2 per cent, the interest is $38.36.
(4) The footing is $7,000,000; and, at 2 per cent, the interest is $383.56.
(5) The footing is $7,960,000; and, at 2 per cent, the interest is $383.56 plus $52.60=$436.16.
The mental shifting of the decimal point, as required in the last two illustrations, will seldom be needed.
ANOTHER USE OF THIS TABLE—Consider the numbers in "thousands" columns as **Days**, and then the interest under the various rates per cent, is on **One Thousand** dollars.
EXAMPLE—The interest on $1,000 for 63 days, at 2 per cent, is $3.45.
The interest on $7,500 for 63 days, at 2 per cent, is $7.5 \times 3.45 = $25.88.

EXPLANATION.—The rates at the top, 3 % to 10 %, are the dividend rates; and the rates in the first column are the income rates; the figures in the body of the table are dollars and cents.

ILLUSTRATIONS.—Stocks or bonds yielding 6 % dividend, would cost, to net 4½ % income, $133.33; to net 8%, $75 per $100 share.

A 6 % stock is bought by an investor at $66.67 per $100 share, what income does it yield on investment? Take the 6 % column and trace down it to $66.67, which is on the 9 % line, which shows that it yields 9 % income on the investment. Likewise, a 6 % stock sold at $126.32 pays 4¾ % income to the purchaser; and a 6 % stock at $108.00 pays between 5½ % and 5¾ %.

What must be paid for a 5 % bond so as to net 8 % on the investment? By tracing down the 5 % column, to the figures on the 8 % line, $62.50 is found to be the answer.

3 % on Basis of 360 Days to the Year.						4 % on Basis of 360 Days to the Year.

Add together the **LOWEST BALANCES** for each month, regardless of whether the time is 2, 3, 4, 5, or 6 months, and find the interest on the **SUM**, by the table.

ILLUSTRATION—The lowest balances at 3 per cent, are January $200, February $300, March $400, April $200, May $200, June $100—total, $1,400.

SOLUTION—Opposite 140 in the "$" column, shifting point one place, is $3.50, which is 3 per cent for 6 months, on the average balance.

Add together the **LOWEST BALANCES** for each month, regardless of whether the time is 2, 3, 4, 5 or 6 months and find the interest on the **SUM**, by the table.

ILLUSTRATION—The lowest balances at 3 per cent, are January $100, February $200, March $300, April $400, May $500, June $600—total $2,100.

SOLUTION—Opposite 21 in the "$" column, shifting point two places, is $5.18, which is 3 per cent for 6 months on the average balance.

EXPLANATORY.

The tables on pages 91, 92, 93 and 94 are very useful in adding-in the interest for the four periods given.

Added Interest Tables enable one to readily find the FACE of a note, acceptance, etc., where the interest or discount is to be added-in. They show WHAT is to be added-in. They are NOT Simple Interest Tables.

Illustrations.

The following illustrations are each for 30 Days at 6%, and the table on page 91 is referred to.

To net $100 draw the note for $100.50; to net $1,000, for $1,005.03.
" " $175 " " " " $175.88; " " $1,750, " $1,758.79.

A Practical Point.

Brown & Co. agreed to accept your note at 90 days to cover the balance of $1,750 that you owe them. You wish to do the correct thing by making a note that will net Brown & Co., when discounted at 6%, exactly the $1,750 due them. The table on page 93 tells you to add $26.65 which makes the note for $1,776.65.

Past Due paper and Overdrafts, charged interest by these tables, are placed on the same footing as if the interest was paid in advance.

A Partial Payment Knot.

Example. A's $4,000 land note falls due at bank and he pays $1 000 requesting that the proceeds be credited in the note after deducting 30 days' discount on the portion that runs.

Solution. $4,000 less $1,000=$3,000.
The added interest on $3 000 is $15.08; and $1,000 less $15.08=$984.92.
The note gets credit for $984.92, and $15.08 is the discount on the portion that runs for 30 days.

Caution. Use the four Added Interest Tables, on pages 91, 92, 93 and 94, for only the time and rates given. Added Interest is strangely different from Simple Interest, in that, no time nor rate given in a table can be used to find the added interest for any other time or rate. Observe that twice the added interest at 4% is *not* equal to that at 8%; and, twice that at any per cent. for 30 days, is *not* equal to the added interest on the same amount for 60 days, etc.

NOTE. These four tables are taken from the revised and enlarged edition of **Fisher's Added Interest Tables,** the "Genuine Bank Discount" book, which contains a table for each day, from 1 day to 364 days, at the same rates. For those dates most used a full-page table is provided; while, for the others, the tables are based on even hundreds, and run three to the page, in very large, clear print, making a book of 152 pages. It contains a table by which the added interest, at *any* rate per cent., and for *any* time, and *any* principal, may be quickly calculated. The book is uniform in size, binding, etc., with this 20th Century book, and is sold at the same price.

The figures in parenthesis, as (3), are Days of the Month; large figures, Days of the Year; small figures, Days of the Second Year.

ILLUSTRATIONS—Required the TIME from February 3 to November 9. Opposite November 9 is 313, and February 3 is 34; then, 313 less 34=279 days. When February 29 lies between the dates, add ONE day to the TIME.

Required the DATE, 93 days from February 3. Opposite February 3 is 34; then, 34+93=127, and opposite 127 is May 7, the date; (but in Leap Year, one day earlier or May 6).
